Roos Vergroesen

Waternet

Korte Ouderkerkerdijk 7

1096 AC Amsterdam

Beste Roos,

Met deze motivatiebrief wil ik graag solliciteren naar de positie van Projectondersteuner Drinkwater bij Waternet. De werkzaamheden en doelstellingen van deze functie spreken mij bijzonder aan. Hoewel ik inmiddels bijna twee jaar in Nederland woon, ben ik de taal nog aan het leren en druk ik mijzelf makkelijker uit in het Engels:

The job application raised my interest because of the focus on team work and collaboration. For my future career, I want to work in a multidisciplinary team – the last couple of years I have appreciated the many benefits of working in a team. I want to be surrounded by people that are keen on learning and sharing their knowledge. I want to use my knowledge to provide the citizens of Amsterdam with safe drinking water.

During my Bachelor's thesis, I completed a three-month internship at a water treatment plant in Serbia, where I gained practical insight into drinking water treatment and the importance of maintaining high water quality standards. With the assistance of my colleagues at the plant, I learned to apply theoretical knowledge in practice, while also developing my communication and teamwork skills. The experience, even if very stressful at times, taught me to remain calm under pressure and to adapt quickly to challenging scenarios. The insights I gained during these three months have strengthened my skill set. I am now better at understanding how to work with a multidisciplinary team and how to be precise and clear in my communication. I know how to organise my work and how to keep everybody involved up to date.

Just last summer I was working on a consulting project for KWR. The project was organised by Utrecht University and my team and I were evaluating the challenges of deep uncertainty in water management – with the special focus on the Netherlands. The goal of the project was to assist KWR in developing a report on the topic of deep uncertainty. As all team members have never worked on this topic before, the organising of the project was challenging. I learned that clear communication and collaboration are essential. But it also showed that respect and understanding of each other's opinions and ideas are needed to work together effectively. Planning meetings, organising tasks and keeping track of the overall progress was a really great challenge for me. I am keen to apply my knowledge and skills to help Waternet in the organisation of big projects. I want to be the spokesperson for the team and work towards the solutions of the problems of today and tomorrow.

Thank you for considering my application.

Kind regards,

Immanuel Dietrich
